Introduction

ASJ, has been established for over 21 years. We pride ourselves in our work and giving our customers what they want.

We are passionate about our products and always strive to produce the best quality work from the materials available.

Recent technological advances has assisted us in our manufacturing methods, but only to the point of using technology at the right time. There is no replacement for time honoured craftsmanship.

This brochure will hopefully give you an in-site into our company and the way we work.

*David Ross
Managing Director*

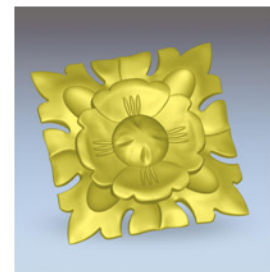

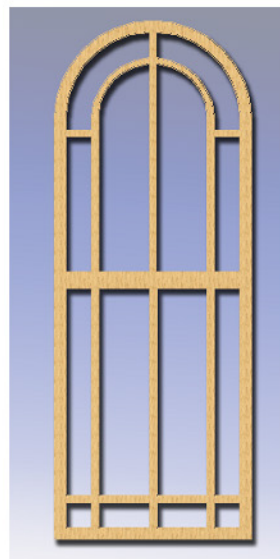

Products

We offer a range of standard products, but also specialise in the bespoke.

*Our basic range includes
Windows, Doors and Staircases.*

*But we also enjoy producing the unusual
For example, traditional green oak trusses, arched and curved windows, engraving and pictorial work for signs, matching and recreating carvings.*

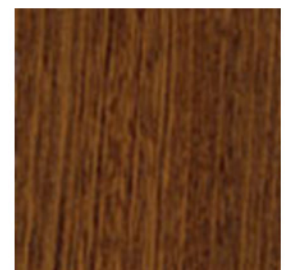

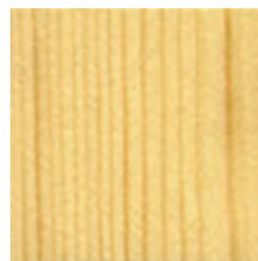

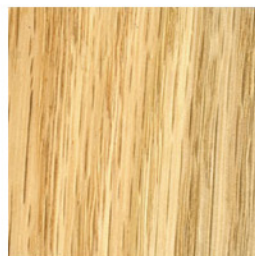

All our timber is supplied via fsc approved companies, where possible we source environmentally approved products.

We are currently introducing a range of engineered / laminated timbers, which are even more environmentally friendly as they use machined timber blocks glued together to form useable timber.

Engineered timber includes both lamination and finger jointing of timber, using high performance adhesives. As well as offering the optimum use of resources it has three major advantages.

- Lamination increases the stability of the timber*
- virtually no knots or surface defects*
- Surface layers are cut to ensure that the grain is vertical to the surface which dramatically reduces the risk of surface movement and splits*

Stairs are one of the most complex architectural structures in the home. Using the latest 3D imaging software we are able to give you a realistic view of your end product giving you and your customer peace of mind.

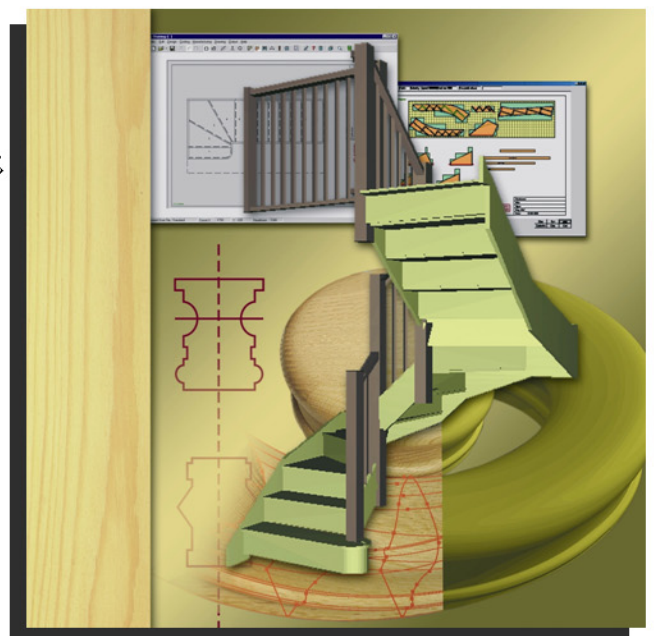

As a staircase manufacturer, ASJ design and manufacture staircases using the latest state of the art software, in connection with precision CNC manufacturing facilities.

As part of our service we will help you:
Design the staircase giving you a CAD drawing to ensure that it meets with your customers satisfaction

- Supply you with accurate dimensions so that you are confident it will fit
- Design the stair that matches the style of home perfectly, maximising the use of space available;
- Ensure it meets with current building legislation

We are suppliers of the Richard Burbidge range of staircase balustrading.

But we will also produce hand crafted parts where a little more individuality is called for.

We can also carve strings and newel posts to a range of designs, enabling you to match your interior décor.

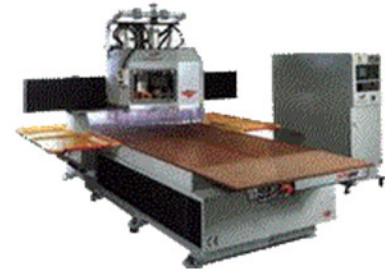

All our staircases are designed via cad and machined using the CNC, this enables us to reproduce the staircase as designed on the computer, ensuring you that you will receive a staircase exactly as ordered.

All staircases are assembled by hand and fully finished where practical so that you

can install the staircase as quickly and cleanly as possible.

Where transport and house layout dictates, we will leave as much of the staircase assembled as possible, and the remaining sections will be marked up and made easily identifiable as possible for you to install on site.
